MESSAGE FROM OUR

Chairman and CEO

For nearly 80 years, Swagelok’s values have been at the foundation of our decisions and actions, especially in how we meet the evolving needs of our customers in an ever-changing world. Our values also influence our approach to sustainability and everyday work. They help ensure we manufacture responsibly, pursue sustainable supply chains, respond quickly, and maintain long-term relationships built on trust.

Our efforts honor a legacy that began when my grandfather, Fred Lennon, founded Swagelok in 1947 on the principle of delivering innovative solutions that help industries operate safely, efficiently, and reliably. This legacy is woven into our company culture as well as the sustainability goals we strive to reach.

Looking back at the past year, I’m very pleased with the accomplishments we’ve made since our inaugural sustainability report in 2024. We’re pleased to share that by working with the Science Based Targets initiative (SBTi), we now have validated targets for greenhouse gas (GHG) emissions reductions. We’ve committed to absolute scope 1 and 2 GHG emissions 42% by 2030 from a 2024 base year. We’ve also committed to reduce absolute scope 3 GHG emissions 25% within the same timeframe. SBTi is an internationally known organization that sets the standards for companies working to reduce their environmental impact. We also implemented a new supplier code of ethics and integrated the Responsible Business Alliance (RBA) code of conduct into our business practices. By further clarifying our expectations for ourselves and our stakeholders, we’ve sharpened the focus on our environmental, social, and governance efforts and we’re proud to share the positive results in this report.

None of this would be possible without the collaboration of associates across our organization and at Swagelok sales and service centers across the globe. Guided by our values, these individuals turn Swagelok’s sustainability priorities into tangible, meaningful outcomes that move us forward and drive change for the better. I’m grateful for their continued commitment, which ultimately benefits our customers, the communities we serve, and the places we call home.

Looking ahead, Swagelok will maintain and strengthen our sustainability efforts by providing ongoing transparency, building on our current customer and supplier relationships, and evaluating new initiatives. This supports the shared success we seek as we move closer to our company’s vision to be the fluid systems experts the world relies on.

I look forward to a productive 2026 and the progress we’ll make in the coming years.

Sincerely,

Thomas F. Lozick
Chairman and Chief Executive Officer

Introduction

COMPANY OVERVIEW

About Us

Swagelok is a worldwide leader in industrial fluid systems—founded in 1947 on the merits of its revolutionary, leak-tight tube fitting. With customer-focused solutions and a passion for making high-quality products, the company serves industries requiring safe and efficient movement of liquids and gases. An approximately \$2 billion company headquartered in Northeast Ohio, Swagelok operates more than 20 manufacturing facilities, and customers rely on local fluid system expertise through nearly 200 authorized sales and service center locations around the globe.

Industries Served:

- Chemicals
- Oil and Gas
- Semiconductor
- Clean Energy
- Food and Beverage
- Industrial Machinery and Equipment
- Life Sciences
- Metals and Mining
- Mobility
- Power
- Pulp and Paper
- Research and Development
- Waste and Wastewater Treatment

2025 Awards

Named a [NorthCoast 99 award winner](#) for the 15th time. The NorthCoast 99 award honors great Northeast Ohio workplaces for top talent.

Named [Employer of the Year](#) by the Ohio Chapter of Veterans of Foreign Wars for our efforts in hiring and retaining veterans.

EcoVadis score increased from 46 to 58, as of July 2025.

Won the Bronze Seedling Award as part of the Greater Cleveland Partnership Groundbreakers Challenge, recognizing our biodiversity-related initiatives.

Key Highlights

~5,500
associates worldwide

20+
manufacturing facilities in the U.S. (domestic) and globally (international)

~200
independent authorized distributor locations, referred to as Sales and Service Centers (SSCs), across the globe

CORE VALUES

Our commitment to our core values drives our success and continues to move us forward as an organization. They guide not only what we do each day, but also how we do it—how we interact with our customers, suppliers, communities, and each other.

ABOUT THIS REPORT

Through this Sustainability Report (“Report”), Swagelok Company (“Swagelok”) shares our approach to sustainable business practices, which are aligned with our core values and culture.

The Report was developed by Swagelok’s Sustainability Core Team in partnership with a Functional Alignment Team, Sustainability Steering Committee, Swagelok’s leadership team, and associates across the business.

Additionally, the Report was prepared with reference to the Global Reporting Initiative (GRI) standards and is influenced by the United Nations Sustainable Development Goals (UN SDGs). Material topics included here reflect the results of Swagelok’s annual Impacts, Risks, and Opportunities analysis.

All data included in the report is from the 2025 calendar year, unless otherwise noted.

OUR CORE VALUES

OUR VISION

**To be the fluid system
experts the world relies on**

Sustainability Overview

At Swagelok, our commitment to sustainability is shaped by our core values as we work with customers, support our associates, give back to our communities, and enhance supplier relationships. That’s why our approach to sustainability encompasses environmental, social, and economic impacts. As the needs of our customers, associates, and communities continue to evolve, Swagelok is committed to advancing our sustainability journey to continue to meet the needs and expectations of our stakeholders.

SUSTAINABILITY GOVERNANCE

Our sustainability governance structure is built to ensure accountability, transparency, and effective oversight. We are committed to engaging key stakeholders in our sustainability initiatives and recognize their essential role in helping us make progress.

Our sustainability governance structure is composed of several key teams and individuals:

- **Director of Quality and Sustainability:** Responsible for organization-wide product quality monitoring and improvement, environmental health and safety, and global sustainability.

- **Manager of Global Sustainability:** This individual is responsible for leading Swagelok’s sustainability outcomes, including program management, reporting, and organizational engagement.
- **Sustainability Core Team:** This team focuses on organizational alignment and the execution of high-priority sustainability deliverables.
- **Sustainability Functional Alignment Team:** This cross-functional team provides feedback and resources and drives accountability. It also oversees the working teams, ensuring that all efforts are aligned and effective.
- **Sustainability Steering Committee:** Comprised of executive leadership, this committee is responsible for setting the direction at critical decision points, ensuring that our sustainability efforts are aligned with our strategic objectives.

In addition, Swagelok has assembled a GHG Emissions Working Team and Sustainable Procurement Working Team to help advance key opportunities and initiative, as well as help scope and implement longer-term improvements. Additional teams will be evaluated at needs and conditions arise.

IMPACT, RISK, AND OPPORTUNITY MANAGEMENT

To identify and prioritize the sustainability topics that are most relevant to Swagelok and our stakeholders, we conducted a double materiality assessment (DMA) in 2024, and updated it in 2025. This assessment considers both financial and non-financial impacts in alignment with global reporting frameworks and best practices. This approach provided our team with a comprehensive view of the sustainability topics that represent the greatest impact, risk, and opportunity to Swagelok’s operations, the broader community, and the environment.

Double Materiality Assessment (DMA)

TOPICS ASSESSED

- | | |
|--|------------------------------------|
| • Product Quality and Safety | • Climate Risk |
| • Commitment to Values | • Business Ethics |
| • Cybersecurity | • Inclusion |
| • Associate Experience | • Product Sustainability |
| • Value Chain Labor Practices | • Waste Management |
| • Associate Health, Safety, and Wellbeing | • Energy Use and Efficiency |
| • Supply Chain Management | • Water Pollution |
| • GHG Emissions Management | • Biodiversity |
| • Use of Hazardous Substances | • Community Engagement |
| | • Water Use and Efficiency |
| | • Air Emissions |

The insights gained from the DMA inform our go-forward approach to sustainability and the contents of this report. We are using the results to focus on areas where we can make the most positive impact, aligning our sustainability initiatives with stakeholder expectations and business objectives, thereby enhancing transparency and accountability in our reporting.

Key Steps in the DMA process:

- **Stakeholder Engagement:**
An internal review of Swagelok’s previous DMA was conducted taking into account the evolving sustainability priorities and concerns of our associates, SSCs, customers, and suppliers.
- **Impact Assessment:**
We assessed and scored actual and potential financial and non-financial impacts of various sustainability topics on Swagelok’s operations and stakeholders, considering both risks and opportunities.
- **Materiality Matrix Development:**
Based on the impact assessment results, we developed a materiality matrix that mapped the significance of each sustainability topic relevant to its impact and financial materiality.
- **Prioritization of Topics:**
Results were reviewed and discussed with the Sustainability Core Team and Sustainability Steering Committee.

STAKEHOLDER ENGAGEMENT

Our stakeholders play a crucial role in shaping how we operate our business, and we are committed to fostering strong, collaborative relationships. In addition to the feedback requested during our DMA, we continue to prioritize transparent communication and actively seek feedback to ensure we are meeting the needs and expectations of those we serve.

Our stakeholder engagement approach is detailed in the table below:

Stakeholder	Engagement Methods
Swagelok Associates	• Leader-associate interactions, such as 1:1 and skip-level meetings • Open-door policy • Performance reviews • Engagement survey • Town hall meetings
Suppliers	• Supplier screening and onboarding • Regular supplier communication and performance evaluations
Sales and Service Centers (SSCs)	• Quarterly meetings with Swagelok • Strategic alignment meetings regarding Swagelok’s vision and strategy • Regular product training and industry educational sessions
Customers	• Regional, strategic, and timely service and support through SSCs • Visits to customer locations with the local SSC • Customer visits to Swagelok’s global headquarters and regional manufacturing facilities
Industry	• Board positions held by Swagelok leaders • Participation in industry associations
Community	• Board positions in local non-profits and community groups held by Swagelok leaders and associates • Swagelok Foundation and Company sponsorship for charitable events and donations to local non-profits and community groups • Team volunteering days

UNITED NATIONS SUSTAINABLE DEVELOPMENT GOALS

Our approach to sustainability is influenced by the principles of the United Nations Sustainable Development Goals.

3 GOOD HEALTH AND WELL-BEING

Ensure healthy lives and promote wellbeing for all ages.

Report Location and Swagelok Efforts:

- Total Rewards
- Health and Safety Training

4 QUALITY EDUCATION

Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all.

Report Location and Swagelok Efforts:

- Associate Training and Development
- Associate Tuition Reimbursement
- Early STEM Education

8 DECENT WORK AND ECONOMIC GROWTH

Promote sustained, inclusive, and sustainable economic growth, full, and productive employment, and decent work for all.

Report Location and Swagelok Efforts:

- Performance Management and Career Development
- Total Rewards
- Talent Pipelines

12 RESPONSIBLE CONSUMPTION AND PRODUCTION

Ensure sustainable consumption and production patterns.

Report Location and Swagelok Efforts:

- Waste Management
- Waste Reduction through High-Quality Products
- Enhancing Product Performance and Sustainability

13 CLIMATE ACTION

Take urgent action to combat climate change and its impacts.

Report Location and Swagelok Efforts:

- Supply Chain Management
- Energy Management
- Enhancing Product Performance and Sustainability
- GHG Emissions Management
- Validated SBTi GHG Emissions Targets

Our People

At Swagelok, we put people first. This means that we prioritize delivering a world-class associate experience where each individual can thrive. Through our commitment to safety, a robust Total Rewards package, support for our associates' growth and development, comprehensive approach to associate listening, and associate resource groups, we create a sense of stability, connectivity, and pride.

No-layoff philosophy

Swagelok has a long-held no-layoff philosophy, demonstrating our dedication to retaining our workforce as a cornerstone of our people-focused culture.

GLOBAL RETENTION

~11 years 

average tenure for associates in 2025,
compared to 10 years in 2024

**includes U.S. and international manufacturing sites*

8.3% turnover*

out of 4,938 permanent associates in 2025,
compared to 8.8% in 2024

**voluntary turnover excluding retirees for U.S. and international manufacturing sites*

SAFE WORK PRACTICES

Safety is an extension of our core values. We believe that a safe environment empowers our associates to thrive. This begins with safe work practices and providing the necessary resources, commitment, and training to ensure all associates in every role are safe and feel safe when performing their daily responsibilities. Our Occupational Health and Safety (OH&S) policy outlines our commitment to:

- Strive for zero accidents and injuries
- Provide mechanical, physical, and procedural safeguards where necessary
- Conduct routine safety inspections to find and eliminate unsafe working conditions
- Train all associates in safe work practices and procedures
- Consider and implement suggestions from our associates to achieve a safer, healthier workplace through a strategic associate feedback process
- Pursue continuous improvement in safety performance, where possible, by setting objectives

Swagelok Company holds an ISO 45001 OH&S standard certification, helping us manage risks and improve OH&S performance across our global manufacturing locations.

We actively encourage our associates to contribute to our culture of safety by submitting safety observations. This regular engagement empowers associates to identify potential risks, share best practices, and enhance workplace safety for everyone.

Their commitment is evident in the submission of more than 38,000 safety observations annually.

SAFETY MANAGEMENT

Our comprehensive safety management practices are designed to prevent accidents, reduce risks, promote health, and ensure compliance with all relevant safety regulations.

Our approach to safety management is governed by the following principles, which are documented in our Safety Manual:

Incident Reporting: We require our associates to report workplace safety incidents, including chemical discharges, spills, security events, injuries, illnesses, and near misses, immediately to facilitate preventive actions. All recordable injuries and significant near misses require an incident investigation, coordinated by the Environmental, Health, and Safety (EHS) team.

First Aid and Medical Protocols: At each Swagelok facility, we have associates who are trained to handle minor injuries and appropriately address contaminated surfaces, helping to ensure that we respond to illnesses and injuries promptly and effectively.

Emergency Procedures: We have established procedures for fires, evacuations, active threats, and weather-related emergencies, which include the use of fire extinguishers, evacuation routes, and designated safe areas during emergencies like tornadoes. We train all associates on these procedures to ensure preparedness and safety during any emergency situation. In the event of evacuation, we have trained sweepers to ensure the safety of all associates. In addition, we have robust crisis response plans for major incidents.

Personal Safety and Ergonomics: Safety is an ongoing effort that requires vigilance and a continuous improvement mindset. Our strategy depends on all associates, in all roles, and at all times, understanding the why of working safely and following our safety absolutes. We encourage them to respect the risk and speak up if or when they see something that needs addressed. We emphasize the importance of personal safety by providing guidelines on proper work attire, establishing formal communication channels to ensure associates receive timely safety-related information, and regularly assessing ergonomics to prevent injuries, including those related to proper lifting techniques. In addition, we ensure that our associates adhere to our Safety Absolutes, which are a set of non-negotiable behaviors for our associates.

Chemical Safety: We require training for associates before they handle hazardous chemicals. Material Safety Data Sheets (MSDSs) are maintained for all chemicals, and we stress the importance of proper labeling and disposal procedures. We require associates to report all spills immediately to ensure safety and compliance.

Personal Protective Equipment (PPE): We outline specific PPE requirements for various tasks, including safety glasses, gloves, and hearing protection. Any required PPE is provided to associates, and we mandate proper use and maintenance of PPE to ensure safety of all associates and visitors.

Safety Team and Culture: We leverage safety teams to promote a culture of safety, conduct safety observations, identify and eliminate risks, and provide safety training. Safety team members assist in ergonomic assessments and suggest improvements to our safety programs. At a minimum, the safety team includes two members of the site leadership team and the EHS team, but often also includes shop floor associates. Our safety teams meet at least once a month and on an ad hoc basis, and we allocate several hours each month for safety team members to participate in meetings, training, and team events that occur on or across different shifts.

HEALTH AND SAFETY TRAINING

Training is a cornerstone of our safety strategy. We provide all associates with regular training on our safety policies and procedures, including annual emergency action drills, as well as role- or location- specific training, to ensure a proactive approach to incident preparedness and response. Our annual Safety Essentials training includes the following topics:

- Identifying hazardous chemicals in the workplace
- Understanding chemical hazard classifications and labels
- Accessing and interpreting safety data sheets
- Following proper material handling and storage requirements
- Wearing required personal protective equipment (PPE)
- Understanding emergency procedures in case of exposure

Driving Towards Zero: Safety Improvements

Since 2018, Swagelok has consistently ranked in the top quintile of our industry for Occupational Safety and Health Administration (OSHA) recordable injury rates. Over the past three years, we have advanced toward top-decile performance, with an ultimate goal of zero injuries. This progress reflects significant injury reduction driven by increased associate engagement, targeted safety communications, a strong focus on preventing unsafe conditions through risk assessments, and clear accountability across our workforce to eliminate unsafe behaviors. Guided by our core value of Respect for the Individual, we continue to strengthen a safety culture that protects the health and well-being of our associates while supporting strong business results.

2025 Safety Course Completion

~91%
of U.S. associates
completed Safety
Essentials training

2025 Global Manufacturing Safety Milestones

Top quintile safety performance*

as an organization for the last nine years

*Per the Occupational Safety Health Administration

65%

reduction in lost time,
year-over-year (in days)

CHEMICAL SAFETY

Swagelok prioritizes the responsible handling, storage, and disposal of chemicals at all its manufacturing sites. Material Safety Data Sheets (MSDSs) are available for all chemicals used at each site, accessible via our internal intranet. In addition, our hazardous communication program ensures that associates are informed about chemical hazards, proper handling procedures, and MSDS access. We provide all shop floor associates with training on chemical hazards and safety measures and techniques for detecting chemical presence and exposure prevention.

Swagelok works cross functionally to ensure compliance with environmental regulations and laws that affect its business and customers. This approach includes testing and surveying suppliers where applicable to identify and mitigate potential chemical risks.

We also monitor international regulations for Swagelok compliance and work with SSCs and customers to support their compliance with various global requirements. This encompasses EU REACH, EU RoHS, EU Persistent Organic Pollutants (POPs), U.S. TSCA, among other regulations.

SAFETY PERFORMANCE TRACKING

Our EHS team reviews safety performance daily at the site level and quarterly with leadership for the entire organization. The data provides a snapshot of our performance against key performance indicators and internal targets, and serves as a valuable tool for driving continued safety and accountability.

We strive to provide an incident-free workplace and consistently achieve top quintile safety performance, as measured by recordable injury rates, as well as days away, restricted, or transferred (DART) injury rates, compared to industry benchmarks.

Global Manufacturing Safety Incident Rate		
	2024	2025
Recordable Injury Rate	1.26	1.06
DART Rate*	0.57	0.50
Fatalities	0	0

*includes lost time, restricted, and transferred work

TOTAL REWARDS

Swagelok’s Total Rewards are built around our associates. We offer a comprehensive package

of valuable benefits to support our associates’ wellbeing and provide for their diverse needs, including physical, mental, emotional, and financial health. We also continually evaluate our offerings to ensure we support our associates and remain competitive in the marketplace.

Our offerings at our international locations vary and are aligned to local best practices. As an example, in the U.S., our Total Rewards offering includes:

- **Compensation:** base pay, merit increases, bonuses, additional shift premium pay for off-shift schedules, and other incentives.
- **Benefits:** a choice of health care plans; dental and vision benefits; Health Saving Accounts (for some plans); disability insurance; life insurance plans; various voluntary insurance offerings; military leave; medical leave; paid parental leave; adoption assistance; paid time off; 13 paid holidays annually; an Employee Assistance Program (EAP); and free on-site flu vaccine clinics.
- **Retirement:** 401(k) contributions and matching; and an Employee Stock Ownership Plan (ESOP).
- **Extras:** discount programs; flexible work schedules for office and shop floor associates; service awards for milestone anniversaries; birthday gift cards for associates’ dependents 18 and under; and appreciation events where associates can choose complimentary tickets and memberships to local attractions.

The Swagelok Health Clinic, operated by Premise Health, opened in June 2025. Located near our main plant and global headquarters, the clinic offers primary and preventive care services to Swagelok medical plan members, including enrolled associates, spouses, and dependents.

Scholarships

In 2025, Swagelok awarded over \$236,000 in scholarships through the Swagelok Advantage Scholarship, which provides financial assistance to students 24 years of age or younger who are dependents of an eligible Swagelok associate. Scholarships are awarded based on academic achievement, extra-curricular activities, and volunteer work. Applications are judged by an independent panel of judges from College Now of Greater Cleveland, which administers the program on behalf of Swagelok.

TALENT

As part of Swagelok's people-first, values-driven culture, we are committed to the ongoing growth and development of our associates. Whether they want to grow in their area of expertise or explore new opportunities, associates are empowered to own their career journeys and development goals.

Global Performance Management and Career Development

At Swagelok, associate success comes from continual, meaningful dialogue between associates and their leaders. Our global process features annual goal setting, mid-year check-ins, and regular feedback and annual reviews from leaders to communicate clear expectations and drive consistency.

All associates are encouraged to actively own their careers through personalized discussions that focus on creating and following individualized development plans. Specifically, Swagelok embraces a learning and development model focused on job-related experiences, social learning, and formal learning. This model supports all associates in identifying and developing their strengths, equipping them with the skills needed to take their desired next steps.

Whether on the shop floor, at a desk, or in the lab, we also support the professional development of our associates through:

- Tuition and certification assistance
- Coaching and mentorship programs
- Technical training opportunities, totaling 97,000+ hours for our U.S. shop floor associates in 2025
- Rotational experiences that allow associates to transition to new roles and functions throughout their careers
- Leadership training from day one, with foundational training and leadership programs to create a consistent culture across the organization
- In addition to in-person training, on-demand resources are also available through our online learning portal, Swagelok University (mySwagelokU), which offers nearly 1,900 courses on a range of topics to support associates at all levels. In 2025, associates consumed nearly 28,000 hours of online training, as well as over 7,900 hours of in-person training.

For shop floor associates in the U.S., talent development specialists (TDS) work to provide opportunities for all associates to advance their careers in line with their interests, while also looking to ensure a robust talent pipeline for current and future needs of the business. At our international sites, we source talent from top technical and apprentice programs.

Recruiting

Our core values of *Respect for the Individual* and *Integrity* are at the heart of our hiring and fair employment practices. We're proud to be an equal

opportunity employer. Our approach to acquiring the best and brightest talent is a defined recruiting strategy, an interview process that evaluates skills and competencies, and a smooth hiring and onboarding experience. Specifically, we use a behavioral-based interview process to ensure candidates are evaluated fairly while aligning to Swagelok's values and ensuring legal compliance.

ASSOCIATE LISTENING

At Swagelok, we believe that every interaction with our associates is an opportunity to listen and learn about their thoughts and experiences. We rely on candid feedback to assess our progress and the effectiveness of investments in the associate experience.

Leaders at each of our global sites have an impact in shaping that experience through their everyday interactions with teams, including shop talks, regular 1:1 meetings, short-interval leadership (SIL) check-ins, and skip-level meetings. In addition, our HR teams engage with associates regularly to answer questions; assist during significant HR events such as open enrollment; and support other associate touchpoints, including our U.S. associate engagement chats.

Open-door Policy

We also encourage associates to reach out to any manager, member of the Human Resources (HR) or legal team, or any executive, including our Chief Executive Officer (CEO), if they need to report any

concerns, if a concern remains unresolved, or if they are dissatisfied with the outcome after an initial report. Additionally, associates have the option to contact our confidential Ethics Hotline to ensure their concerns are heard and addressed appropriately.

Recognizing and Supporting Wellbeing

Supporting associate wellbeing means recognizing the realities of all work schedules, including the challenges of working off-shift. At Swagelok's Isle of Man facility, that awareness is reflected in programs designed specifically to support shift workers. In 2025, associates working off-hour shifts participated in a workshop series called Nightclub, designed to address potential health risks associated with shift work, including higher rates of diabetes, heart disease, mental health challenges, and more. The sessions offered practical information and strategies to improve sleep quality, mental wellbeing, diet and nutrition, and physical activity. To add an element of fun to physical wellness, the team also organizes monthly five-a-side soccer matches, open to all associates, helping participants stay active while building relationships beyond the workplace.

Global Engagement Survey

Each year, we conduct a workforce engagement survey to assess how we are delivering against our desired associate experience. In 2025, 63% of associates participated in the survey. Our overall engagement, a key performance indicator, scored at 75% in 2025. Meanwhile, 74% of respondents would recommend Swagelok as a great place to work (down 5% from 2024). Our results reflect top-tier engagement compared to benchmarks.

Associate feedback continues to guide our actions and priorities, shaping initiatives such as expanded benefits, the Swagelok Health Clinic, flexible shop floor schedules, and enhanced development opportunities. The 2025 survey results offer a transparent view of associate sentiment and help inform our ongoing focus areas.

CULTURE AND CORE VALUES

Respect for the Individual is a core value. Our commitment to our core values creates a culture where associates can bring their whole, authentic selves to work. Differences are not just celebrated; they are essential. We want associates to feel valued and empowered to leverage their distinct talents, experiences, and insights to propel innovation and ensure enduring success. As a global company, cultural awareness is critical to understanding each other and fulfilling our customers’ needs across the globe. *Respect for the Individual* and *Integrity* are not just words to us; they are rooted in our core values and demonstrated daily through our actions. These principles guide how we build our teams, develop leaders, and create a sense of belonging for our associates.

Associate Resource Groups (ARGs)

At Swagelok, our ARGs are crucial in fostering an inclusive culture. They offer a range of relationship-building, professional development, and personal skill-building opportunities. All U.S. associates are welcome to join any ARG and benefit from these opportunities.

Swagelok Kaleidoscope: Provides opportunities to build empathy and community for LGBTQIA+ individuals.

Swagelok Mosaic: Celebrates and supports multicultural awareness through education, dialogue, and outreach.

Swagelok NextGEN: Provides opportunities for associates who are newer to Swagelok or early in their careers to meet and connect with peers from across the organization.

Swagelok Veterans: Supports connection and engagement among veterans, active duty service members, and military families.

Swagelok Women's Network: Advances connection and shared understanding related to the female work experience.

 2,420+ associates

attended ARG events across five Northeast Ohio Swagelok facilities in 2025 (includes attendance by some associates at multiple events).

64% of unique ARG participants were shop floor associates.

43% of unique domestic U.S. associates attended an ARG event.

25% of shop floor associates attended at least 1 ARG event.

Community Engagement

Swagelok is committed to giving back to the communities where our associates live and work. Through our community efforts and workforce development partnerships, we're focused on the following priorities:

- **Supporting Science, Technology, Engineering, and Mathematics (STEM) education:** We support and engage in STEM career education and exploration activities to spark interest and passion among young learners.
- **Advancing manufacturing as a career and helping to build Northeast Ohio's talent pipeline:** Our initiatives focus on developing critical skills, providing opportunities for upskilling and technical training, and attracting and retaining talent in the region.

Our efforts include charitable donations, programmatic support, sponsored volunteer activities, and the Swagelok Foundation's Matching Gifts Program, among others. Additionally, our community engagement efforts serve as a source of pride for Swagelok associates and provide a way they can give back to organizations of their choice. Swagelok is also represented on the Steering Committee of the Sustainability Leaders Group for the Greater Cleveland Partnership (GCP). This committee helps guide the work of

the GCP Sustainability Leaders Group, which is comprised of 40+ major global organizations coordinating on sustainability initiatives throughout the greater Cleveland region.

THE SWAGELOK FOUNDATION

In 2000, our company established the Swagelok Foundation to become a pivotal component of Swagelok's commitment to community engagement and corporate social responsibility. Its aim is to support Swagelok's core values by providing donations and grants to nonprofit organizations in Northeast Ohio that align with strategic focus areas.

The Board of Trustees is responsible for determining the policies of the Foundation, executing its purposes, and managing its affairs. Trustees are elected for three-year terms and may be re-elected, ensuring continuity and sustained impact.

The Swagelok Foundation exemplifies the company's commitment to making a meaningful difference in the world, supporting initiatives committed to advancing manufacturing, STEM, and workforce development in Northeast Ohio. It also serves as a funding resource for Swagelok associates to provide them with opportunities to give back to organizations aligned with their interests and passions in a multitude of ways which include:

- Corporate matching gifts program
- Associate resource group (ARG) funding to non-profits of their choice
- Associate board service contributions
- Associate-driven community engagement grants

2025 Community Engagement Highlights

Swagelok contributed

\$1.5M to **170+** non-profit organizations, including approximately \$134K in matching contributions from the Swagelok Foundation.

80+ associates

held board seats for non-profit organizations.

Our efforts directly impacted more than

10K students and we continue to engage in opportunities to inspire the next generation of manufacturing and STEM leaders.

Great Lakes Science Center Manufacturing Day 2025

Swagelok was a gold-level sponsor of Manufacturing Day at the Great Lakes Science Center in downtown Cleveland, Ohio. Swagelok sent nearly 30 volunteers to work with students at four different activity stations, in addition to hosting a career fair table. More than 650 middle and high school students from 22 schools spent a full day at the center, participating in hands-on learning with multiple STEM activity stations. 47% of students surveyed said they are more interested in pursuing a career in manufacturing after attending the event, highlighting that ongoing community engagement and education is key to building a robust talent pipeline for both Swagelok and other manufacturing organizations.

Swagelok Opens Neighborhood Innovation Center

In 2025, the Solon branch of the Cuyahoga County Public Library (CCPL) opened the Swagelok Innovation Center. Funded in part by Swagelok and the Swagelok Foundation, the 125 m² (1,350 ft²) Innovation Center is designed to connect people with real career opportunities in manufacturing

and engineering, allowing residents to pursue advanced training and workforce opportunities. Open to the public and serving anyone with a CCPL library card, visitors can access design software, equipment, and training that helps support regional workforce development.

Talent Pipelines

To enhance our community and brand presence, as well as attract high-performing talent, we focus on a few talent pipelines in the U.S. Examples include:

- **Early STEM education:** We are dedicated to inspiring a passion for STEM among students of all ages through speaking engagements and interactive, hands-on activities at school and community events.
- **High School and Technical School Program:** Each year, we work with Northeast Ohio high schools and technical schools to ensure that their curricula align with the skills needed at Swagelok. We also offer a paid hourly intern program designed for students to explore careers in manufacturing.
- **University Students:** Swagelok provides a variety of paid summer college internships in Northeast Ohio, with positions across the organization. Additionally, we offer Engineering Co-Op Programs and a Career Development Program (CDP) with a variety of work assignments to new engineering, supply chain, and commercial associates. Across our CDP, co-op, and intern programs, we hired 90 students from 17 different universities. And, 78% of our CDP

positions were filled from our internship program; demonstrating a robust pipeline of talent for the future.

- **Military and Veterans:** Swagelok is a proud supporter of multiple Department of Defense hiring initiatives, including the SkillBridge Program, Army Reserve Private Public Partnership, Employer Support of the Guard and Reserves, Military Spouse Employment Partner, and student veterans.

technical programs
and high schools

*2024: 46 hires from 12 different programs and high schools.

Customer Experience

We built our reputation on a foundation of excellence, delivering high-quality fluid system products that have consistently set the standard for reliability and performance. Over time, we have evolved to meet the changing needs of our customers, going beyond delivering exceptional products to also providing technical expertise.

By bringing our unparalleled fluid systems knowledge directly to customers, we've positioned ourselves as a trusted partner, offering tailored solutions that enable optimal system performance and enhance the safety and efficiency of their operations.

Our customers count on our products to contain and control liquids and gases in critical applications. Even the smallest fluid system component can play a big role in protecting their **people, profitability, and our planet**. That's why we also leverage deep understanding of materials science and fluid system design to provide service and training to customers seeking to contain hard-to-handle, small-molecule gases under pressure. This training empowers our customers with the knowledge and support they need to maximize system performance, prevent fugitive emissions, reduce downtime, and maintain safety in every application.

SALES AND SERVICES CENTERS (SSCs)

Each day, thousands of fluid system specialists work across Swagelok's manufacturing facilities and authorized SSC locations to meet global customers' evolving needs. Local specialists, backed by a global team of technical experts, support customers in enhancing the performance, reliability, and safety of their fluid systems while also supporting cost reductions and environmental risk mitigation.

This localized approach not only strengthens customer relationships but also plays a crucial role in increasing product lifespan and decreasing waste. SSC associates collaborate with customers to help them meet their own sustainability goals.

Additional advantages of Swagelok company-owned and independent authorized SSCs include:

- **Faster Response Times:** The localized support model enables quicker response times for product delivery, troubleshooting, and service requests. This agility allows Swagelok to meet the dynamic needs of customers, particularly in industries where downtime is costly.

- **Local Market Understanding:** SSCs possess deep technical knowledge of Swagelok products and services, as well as thorough understanding of their regional market dynamics and cultural nuances. Maintaining a regional level of knowledge allows SSCs to tailor solutions that align with local customer needs and preferences, enhancing the relevance of Swagelok's offerings.
- **Efficient Resource Management:** By distributing Swagelok products and services locally, SSCs reduce transportation costs and emissions, and demonstrate our commitment to sustainability.

Building Sustainable Procurement Practices

In 2025, training sessions were conducted for Swagelok's supplier development engineers and sourcing specialists to raise awareness of sustainability best practices aligned with topics that are material to our organization and our key stakeholders. This supports supply chain due diligence and supplier capacity building, including product quality and safety, GHG emissions management, business ethics, substances of concern, and more.

Continuous Improvement Activities for 2025

Swagelok earned third-party recognition from EcoVadis for improvements in our sustainability performance across our value chain, as measured against the EcoVadis benchmark. Swagelok's EcoVadis score is 58, up from 46 in 2024, which moves us from the 33rd percentile to the 56th percentile.

In October 2025, the organization underwent an extensive independent third-party audit of our sustainability practices against the Responsible Business Alliance (RBA) code of conduct, with references to global standards and best practices. The audit was conducted at our Global Headquarters and main manufacturing plant in the U.S., which includes production, assembly, cleaning, packaging and distribution and resulted in a score of 187.7 out of 200, up from a score of 124 in 2023. In early 2026, we conducted a close-out audit and received an updated score of 200 out of 200.

PRODUCT QUALITY AND SAFETY

We place a strong emphasis on product quality and safety, ensuring that our products meet the highest standards. Customers rely on Swagelok to deliver products and solutions that help them control direct emissions, ensure the safety of their operations, meet their regulatory requirements, and reach their own sustainability goals.

Our dedication to quality is reflected in every stage of our design and manufacturing processes, where we integrate rigorous quality checks and adhere to stringent safety protocols.

Our approach to product quality and safety involves:

- **Comprehensive Quality Checks:** We incorporate quality checks throughout the design and manufacturing process, including simulated computer modeling, extensive non-destructive testing of raw material, and dimensional testing. These measures help ensure that every product meets our stringent quality standards before it reaches the customer.
- **Swagelok Quality System (SQS):** Our organization, including the global distribution network, is supported by the Swagelok Quality System, compatible with ISO 9001-2015. This system ensures Swagelok and SSCs deliver consistent, high-level quality across all products and services.

- **Commitment to Product Safety:** Safety is integral to our product design and manufacturing processes. We rigorously test our products to ensure they perform safely and reliably under specified conditions, providing customers with peace of mind and confidence in their operations.
- **Customer Training and Support:** SSCs offer training in component installation and system audits to help customers optimize their fluid systems for safety and efficiency. Our goal is zero customer disappointments, ensuring every product is free of defects and performs as expected.

By maintaining these high standards, we deliver exceptional value to our customers while reinforcing our position as a trusted leader in the fluid systems industry.

PRODUCT PERFORMANCE AND SUSTAINABILITY

Swagelok products are designed to deliver the reliability, ease of installation, and lasting performance needed to keep processes and equipment operating safely, efficiently, and cost-effectively. They are also designed to stand up to the demands of challenging operating environments in diverse industries across the globe, are rigorously tested, and are backed by the **Swagelok Limited Lifetime Warranty**.

Along with SSCs, we help customers meet their sustainability objectives by:

- **Offering leak tight-products and stringent validation testing to support customers' fugitive emissions compliance needs.** We work diligently with end customers' fluid system designs to pave the way to emissions reduction.
- **Consulting customers on reliable products to achieve Scope 1 emissions reduction goals.** Swagelok field engineers conduct energy emissions surveys (EES) to detect leaks and identify process efficiency opportunities. Our analytical instrumentation experiences enable reliable environmental monitoring.
- **Providing training and development programs to enhance the skills and knowledge of customer teams.** This includes technical training and development programs to ensure teams are well-equipped to manage and maintain their fluid systems to promote longevity, efficiency, and sustainable operations.
- **Identifying issues that can cause potential safety incidents or violations.** Evaluation and advisory service offerings help customers optimize the performance of their fluid systems to protect the quality of their products and safeguard the health and wellbeing of their associates.

Swagelok holds product and systems certifications from numerous agencies. This assures Swagelok products are globally recognized, as demonstrated by the following quality system and product

approval certifications. The extensive list of agencies represents global requirements in the Americas, Europe, and Asia Pacific and includes various certifications:

- ISO-9001, ISO-14001 and ISO-45001
- **Fugitive Emissions:** ISO 15848-1, TA-Luft, API 624, API 641
- **Hazardous Location:** ATEX, IECEx, and UKEx
- **Clean Energy CNG:** ECE R110, ISO 15500, NGV 3.1, 4.2, and 4.6
- **Clean Energy H2:** ISO 19880, ISO 19887, HGV 3.1, ISO 12619, H35, and H70
- **High Pressure Toxic Gas:** KGSC, METI

Substances of Concern and Risk Management

Swagelok continues to support our sales and service center network and customers in navigating the evolving regulatory landscape around PFAS (per- and polyfluoroalkyl substances). Based on our due diligence, as of October 2025, Swagelok does not directly purchase or use any of the five PFAS chemicals currently regulated by major global regulatory bodies: FPOA, PFOS, HFPO-DA, PFHxS, and PFNA.

Environmental Stewardship

Underlying our operations and products is our value of *Respect for the Individual* and our commitment to the communities where we live and work.

Our approach to environmental stewardship includes:

- Fulfilling all applicable compliance obligations as required by local agencies or laws
- Pursuing continuous improvement in environmental performance by setting objectives
- Integrating environmental responsibility into business strategies and initiatives
- Maintaining effective communication on environmental matters through training and awareness
- Promptly undertaking root cause analysis and corrective action when a potential issue is identified

In addition, we maintain an ISO 14001 certified Environmental Management System (EMS) for our main order fulfillment site. This system guides our environmental stewardship by promoting efficient resource use, reducing waste, and ensuring compliance with environmental regulations, all while fostering a culture of environmental responsibility among our associates.

APPROACH TO CLIMATE CHANGE

Swagelok understands the dual challenge faced by many of our customers in energy-intensive industries, balancing operational demands with environmental considerations. Swagelok

products and services are designed to reduce leaks, prevent emissions, and enhance process efficiencies, directly addressing the needs of energy-intensive industries. These innovations not only meet operational demands but also reduce contributions to climate change.

Climate risk encompasses both physical risks, such as extreme weather events, and transition risks, including regulatory changes and shifts in market expectations. For a company like Swagelok, climate risks can impact supply chain stability, product compliance, and overall business continuity. That’s why we integrate climate risk considerations into our existing risk management framework, recognizing the importance of addressing these challenges as part of our broader commitment to sustainability. For more information on our **Approach to Risk Management**, see page 22.

ENERGY MANAGEMENT

Effective energy management is a key component to advancing our environmental stewardship. Our efforts around routine maintenance and upgrades contribute to overall energy efficiency of the company.

Recognizing the significant role energy plays in our own operations and those of our customers, specific examples include:

- **Reducing our carbon footprint:** We are actively evaluating opportunities to accelerate

Electricity Consumption (MWh)				
Metric	GRI Disclosure	Assurance Status	2024	2025
Total electricity consumption	GRI 302-1	Internal	119,591 ¹	126,482

¹ 2024 total electricity consumption value of 117,545 MWh, revised to 119,591 MWh due to improved data quality

decarbonization and improve energy resilience. This includes identifying quick-win, low-cost energy conservation measures, developing the business case for larger long-term decarbonization investments, and leveraging available grants.

- **In 2025, Swagelok installed an electric submetering system at our Solon Main Plant.** This real-time monitoring of energy demand and consumption will allow the team to better support capacity planning, identify demand spikes and peak drivers, and validate electrical efficiency improvements.
- **Ensuring leak-tight systems:** Where possible, we use our own products to ensure our systems and processes are leak-tight and effective in reducing energy loss and improving efficiency.
- **Procuring renewable energy:** In 2025, we purchased Green-E certified renewable energy credits (RECs) equal to around 7% of our total consumption—8,800 MWh of renewable energy. We are planning to increase our renewable energy purchasing over time.

New Distribution Center Built on Efficiency

In 2025, Swagelok completed construction on a state-of-the-art distribution center. This 18,600 m² (200,000 ft²) facility was intentionally designed to limit emissions, control costs, and support associate safety.

Air conditioning was only installed in areas occupied by associates, totaling about 930 m² (10,000 ft²). LEDs with motion-sensitive controls automatically turn lights off during periods of inactivity. The exterior was built with insulated prefabricated panels, and additional insulation was added to the ceiling and roof. Low-flow water fixtures were installed to reduce water consumption.

With associate safety and ergonomics in mind, workstations were designed around mobile robots that bring parts to the associates for picking, reducing the risk of strains or injury.

GREENHOUSE GAS (GHG) EMISSIONS MANAGEMENT

Greenhouse gas (GHG) emissions management is a primary focus of our sustainability strategy, and central to our commitment to operate responsibly and support customers in meeting their sustainability goals.

We have taken significant steps to strengthen our management of GHG emissions and improve the completeness, accuracy, comparability, and verifiability of our reported data and commitments, including:

Expanded Company-Wide Inventory: Our organizational boundary has expanded beyond our US sites to include all global operations.

Added in Scope 3 Emissions: Scope 3 emissions are now included in our reported emissions inventory. A materiality analysis identified the most significant

categories: Purchased Goods & Services, Capital Goods, Fuel- and Energy-Related Activities, Upstream Transportation and Distribution, Waste Generated in Operations, Business Travel, Employee Commuting, and Use of Sold Products. These correspond to Categories 3.1, 3.2, 3.3, 3.4, 3.5, 3.6, 3.7, and 3.10, respectively.

Secured Third-Party Verification: Swagelok proactively obtained third-party verification of its 2025 Scope 1, Scope 2, and upstream Scope 3 emissions. The LRQA Inc. limited assurance statement appears on pages [30 to 32](#), and the assurance status of each emissions category is shown in the tables below.

Established Science-Based Targets: Swagelok committed to setting company-wide science-based GHG emissions reduction targets according to the Science Based Targets initiative (SBTi) rules. The

SBTi has since validated Swagelok’s near-term science-based emissions reduction targets and published them on the SBTi Dashboard: ‘Swagelok Company commits to reduce absolute scope 1 and 2 GHG emissions 42.0% by 2030 from a 2024 base year. Swagelok Company also commits to reduce absolute scope 3 GHG emissions 25.0% within the same timeframe.’

Scope 1 emissions at Swagelok come from direct sources such as on-site fuel combustion for heating and manufacturing processes. To help mitigate these emissions, we continue to pursue opportunities to improve fuel efficiency and reduce fuel use in our operations. Scope 2 emissions are associated with electricity we purchase to power our operations, and we seek to reduce our usage through energy efficiency measures. As Scope 3 emissions categories are now included in our inventory, we

GHG Summary (tCO2e)				
Category	GRI	Assurance status	2024	2025
Scope 1 – Direct GHG emissions	GRI 305-1	Third-party Limited Assurance ¹	12,447	12,444
Scope 2 – Energy indirect GHG emissions (location-based)	GRI 305-2	Third-party Limited Assurance ¹	52,753	55,369
Scope 2 – Energy indirect GHG emissions (market-based, after RECs)	GRI 305-2	Third-party Limited Assurance ¹	52,506	49,812
Scope 3 – Other indirect GHG emissions (upstream)	GRI 305-3	Third-party Limited Assurance ¹	260,310	198,337
Scope 3 – Other indirect GHG emissions (downstream) ³	GRI 305-3	No External Assurance	378	18,937

1. See Third-Party Limited Assurance Statement on page 30 to 32 for verification of 2025 GHG emissions data only.
2. Waste generated in operations emissions now include mixed metals. Mixed metals were not included in 2024.
3. Use of sold products emissions were first calculated in 2025 as part of our SBTi validation process but were not included in 2024.
4. All leased assets are accounted for in either Scope 1 or 2, based on the operational control consolidation method.
5. Not applicable

Scope 3 Categories (tCO2e)

have begun working with suppliers to identify reduction opportunities.

Beyond our own operations, we continue to play a significant role in helping our customers reduce their own emissions footprint through technical expertise, energy emissions surveys, and ongoing collaboration.

Our Manager of Global Sustainability and the Sustainability Core Team continue to spearhead the organization’s GHG emissions reduction efforts, working cross-functionally with the Sustainability Functional Alignment Team to ensure that emissions reduction initiatives align with key operational objectives and key results.

Swagelok actively monitors GHG regulations and is committed to complying with all applicable requirements, including the European Union’s Carbon Border Adjustment Mechanism (CBAM). Supplier inputs and insights from authorized SSCs help inform this work. Overall, Swagelok remains dedicated to maintaining awareness of evolving regulatory developments and advancing initiatives that support our customers.

AIR EMISSIONS AND POLLUTION MANAGEMENT

Swagelok focuses on minimizing emissions from our operations while ensuring compliance with all relevant environmental regulations. We maintain air permits across all applicable manufacturing sites and actively monitor the use of substances of

concern across our supply chain. To stay proactive in adhering to compliance standards and best practices, we regularly explore safer alternatives where possible.

WATER USE AND WASTEWATER MANAGEMENT

Responsible water use and effective wastewater management are part of our comprehensive environmental stewardship efforts. Our approach involves implementing best practices to minimize water consumption and ensure that wastewater is treated and managed in compliance with all relevant regulations.

At our Koppel, Pennsylvania facility, a wastewater treatment plant that came online in late 2024 has implemented process enhancements that increase the recirculation of treated water, reducing municipal water consumption by approximately 18 megaliters (4,700,000 U.S. gallons) in 2025. This improvement is expected to decrease overall annual water usage by approximately 19 megaliters (5,000,000 U.S. gallons).

Key practices include:

- **On-Site Wastewater Treatment:** Swagelok employs on-site wastewater treatment systems to treat industrial wastewater before discharge. This is to ensure that our wastewater meets or exceeds local regulatory standards, protecting local water bodies from pollution.

- **Regular Monitoring and Compliance:** Our Environmental and Safety Coordinators (ESCs) are responsible for monitoring wastewater discharge and ensuring compliance with local regulations. This includes regular sampling and analysis to verify that discharge parameters are within permitted limits.

Domestic Water Consumption (in megaliters)	
2024	2025
268	237

WASTE MANAGEMENT

Our Waste Management Program is designed to ensure systematic control over waste collection, characterization, storage, transportation, processing, treatment, recovery, and disposal. This program is aimed at minimizing environmental impact and promoting sustainability across all Swagelok sites.

Key actions in our waste management strategy include:

- **Characterization and Segregation:** Waste streams are characterized and segregated to help ensure proper handling and disposal. This includes hazardous waste, universal waste, and non-hazardous special waste. Each waste stream is managed according to regulatory requirements.

- **Reduce, Reuse, and Recycle:** We actively seek opportunities to recycle and reuse materials, such as scrap metal and used oil, to reduce waste generation at the source. Our facilities are equipped to handle recyclable waste streams, including electronic waste, paper, and cardboard through contracted services. For example, as part of our manufacturing process, we use a spinning process to help clean chips to remove leftover cutting oil. This allows the oil to be collected and reused.

– Our austenitic stainless products are composed of at least 70% recycled content, including 47% post-consumer scrap and 23% pre-consumer scrap from the recovery of material diverted from the waste stream during the post-making processes.

- **Training and Compliance:** Associates involved in waste management receive training to help ensure compliance with all relevant regulations and environmental laws.

WASTE REDUCTION
THROUGH HIGH-QUALITY
PRODUCT DESIGN

Through our dedication to quality and innovation, we contribute to waste reduction by producing high-quality products designed for longevity and to withstand extreme environments. Our products are engineered to perform reliably over extended periods, reducing the need for frequent replacements and minimizing waste generation. This focus not only supports our customers in maintaining efficient operations but also contributes to environmental sustainability through the principle of circularity by reducing the overall material consumption and waste associated with product turnover.

Key aspects of our approach include:

- **High-Quality Materials:** We use high-quality materials and advanced manufacturing processes to ensure our products can endure harsh conditions and maintain performance over time.
- **Rigorous Testing:** Our products undergo extensive testing to verify their reliability and durability, ensuring they meet the highest standards of quality and performance.
- **Innovative Design:** By incorporating innovative design features, we enhance the functionality and lifespan of our products, providing long-term value to our customers.
- **Customer Support and Training:** Along with SSCs, we offer comprehensive support and training to help customers maximize the lifespan and efficiency of our products, including product service kits and repair instructions for products that may require local maintenance. This helps further reduce waste and promote sustainability.

Waste Tracking

Our waste tracking system allows us to monitor and manage the waste generated across our operations effectively. By tracking our waste, we identify areas for improvement, aim to reduce waste generation, and enhance our recycling and reuse initiatives.

Non-Regulated Waste (in metric tons) U.S. sites only		
	2024	2025
Hazardous Waste	409	486
Non-Hazardous Waste	410	1,192 ¹
Recycled/Reused ²	8,804	10,007
Universal Waste	3	2
Total Waste	9,626	11,687

¹Includes additional non-hazardous waste streams that were not within scope of our data gathering and reporting in 2024.
²Table now includes recycled alloys for each year.

Continuing to Prioritize Environment, Health, and Safety

In 2025, Swagelok completed an enterprise-wide environmental health and safety risk assessment, evaluating location-specific and corporate risks. Conducted every three years, the assessment reviews topics detailed in Swagelok's annual Double Materiality Assessment (DMA), including employee health and safety, GHG emissions management, waste management, water pollution, substances of concern, and more. Utilizing findings from the assessment, we implemented risk controls and mitigations that allow us to continue operating sustainably and safely.

Biodiversity and Native Plant Growth

In March 2026, we received the Greater Cleveland Partnership Groundbreakers award (Bronze Seedling) for our ongoing native grass expansion in Northeast Ohio. In 2019, Swagelok designated 5 acres to allow native grasses and plants to regrow into native-friendly habitat. In 2025, we expanded this program by designating an additional 5 acres of lawn that began regrowing as native species in spring 2026.

Business Conduct

Our culture is deeply rooted in our core values, including *Integrity and Respect for the Individual*. We believe that robust compliance practices are essential to maintaining the trust of our stakeholders and ensuring the long-term success of our company.

BOARD OF DIRECTORS AND EXECUTIVE LEADERSHIP TEAM

Our Board of Directors and Executive Leadership Team work in close partnership to ensure robust corporate governance that drives long-term success. The Board is charged with oversight, providing guidance on the company's overall strategy and ensuring accountability. The Executive Leadership Team sets and operationalizes the strategy, ensuring the company upholds its core values and is positioned to meet its customers' evolving needs. This collaboration not only safeguards financial performance and compliance but also fosters innovation, risk management, and stakeholder trust.

GOVERNANCE POLICIES

We maintain policies, procedures, and leadership oversight designed to promote ethical conduct, compliance with laws and regulations, and effective risk management. Our Code of Conduct sets the course for our approach to business for all associates including executive leadership and

members of the Board of Directors. Key policies and processes in our Code of Conduct include our commitment to transparent reporting, our comprehensive procedures for reporting concerns, guidelines around intellectual property and handling confidential information, anti-corruption, competition laws, trade compliance, commitment to quality and product safety, and maintaining a culture of respect in the workplace.

We also maintain standalone key policies including Workplace Investigation Guidelines, Distributor (SSC) Code of Ethics, a risk management framework, and a Supplier Code of Ethics, which outlines our expectations and guidelines for suppliers and all third parties.

Swagelok regularly reviews its Code of Conduct and practices to ensure they are appropriate and reflect our high ethical standards and core values, and changes are reviewed with the Board.

Conduct and Ethics Training

In alignment with our commitment to maintaining the highest standards of integrity and compliance, our associates are required to comply with all applicable laws and regulations, and we provide regular compliance training to ensure awareness and understanding of our policies. Topics covered include avoiding conflicts of interest, anti-bribery, antitrust, promoting safety and security at work, protecting human rights, intellectual property

protection, protection of company information, privacy and information security, preventing harassment and promoting respect, and promoting the reporting of misconduct. Our compliance training schedule includes modules on these topics, and we monitor compliance training on a regular basis.

Conflicts of Interest

We expect all associates to avoid situations where personal interests could conflict with the interests of Swagelok. We have clear guidelines to help associates identify and manage potential conflicts, ensuring that decisions are made in the company's best interest. Any potential conflicts must be disclosed to a manager and the human resources department.

Competitive Practices and Anti-Corruption

Swagelok prohibits any form of bribery, kickbacks, or improper payments. We comply with all anti-corruption laws and expect our associates to report any suspicious activities. Our competitive practices are guided by a commitment to fair competition and compliance with relevant laws. Associates are trained to recognize and avoid situations that could lead to anti-competitive behavior or corruption. We value transparency and integrity in all our dealings and have strict policies to prevent any form of corruption.

Swagelok regularly conducts compliance risk assessments covering areas such as competition,

trade, and anti-corruption laws. We also apply risk-based due diligence requirements to third parties we work with, including anti-corruption reviews when appropriate.

Intellectual Property and Confidential Information

At Swagelok, our brand is fundamentally built upon the strength of our intellectual property, which is a testament to years of investment and the dedication of our associates. We mandate the protection of our intellectual property and confidential information—be it technical, financial, HR-related, or business information—as they are crucial to our success. Associates are to limit access to confidential information to associates who need-to-know such information, and to third parties only when necessary for legitimate business purposes, ensuring that appropriate non-disclosure agreements are in place. It is imperative that no invention, idea, or innovation is disclosed outside the company before a patent decision is made, as premature disclosure can jeopardize our ability to secure a patent.

We expect our associates to secure and properly dispose of confidential materials and to mark them as "Confidential" when appropriate. When engaging with outside vendors, we work closely with our sourcing and legal teams to ensure that Swagelok retains appropriate rights to the work produced. We

also expect third parties to respect our intellectual property rights, and we are committed to respecting the legitimate rights of others. Our associates are instructed to respect valid patents, trademarks, and copyrights of third parties and to use confidential information only as permitted by existing agreements. This commitment to intellectual property protection is integral to maintaining the integrity and success of Swagelok.

Non-Discrimination and Anti-Harassment

Swagelok does not tolerate discrimination or harassment with respect to any aspect of employment based on any protected characteristic. This includes race, ethnicity, creed, color, religion, sex, pregnancy, age, national origin, ancestry, disability, genetic information, veteran or military status, sexual orientation, gender identity, or any other protected characteristic. Associates who have experienced any type of discrimination or harassment are encouraged to immediately notify a member of human resources or management. Associates can also report concerns anonymously to Swagelok's Ethics Hotline. For additional information, associates can refer to our Policy on Prevention of Discrimination and Harassment.

Whistleblower Protections

We promote a culture of openness and accountability, encouraging associates to speak up about any concerns or potential misconduct. Our reporting

channels include direct communication with supervisors, the Human Resources Department, or the Ethics Hotline, which allows anonymous reporting. For more on our open-door policy, see page 11.

We prohibit retaliation against any associate who in good faith reports or seeks guidance on ethical or compliance issues or who participates in an investigation, including a suspected violation of our Code of Conduct, or any applicable law.

In 2025, we had no public claims or cases regarding corruption, nor convictions or fines for violations of anti-corruption and anti-bribery laws.

CORPORATE RISK MANAGEMENT

Our risk management framework is designed to identify, assess, and mitigate potential risks in all aspects of our business. Along with our commitment to remedy any negative impacts that may arise, we have established processes outlined in our Crisis Management Manual as well as a comprehensive Enterprise Risk Management/Business Continuity Program that focuses on anticipating and managing potential threats. This program is integral to our ability to maintain high levels of customer service and operational excellence. We regularly review and update our risk management strategies to ensure resilience and adaptability and to ensure proper alignment to company business strategies.

The Swagelok Risk Management and Business Continuity Program organizes the company into

strategic areas to effectively identify, analyze, rank, and mitigate risks at a detailed level. This structured approach allows for a comprehensive view of risks, which are then integrated into the Swagelok Enterprise Risk Management Program. Risk champions from each strategic area review these risks at an organizational level, ensuring a holistic understanding of both internal and external factors. We also hold annual inspections and audits that are conducted by our property and business interruption insurance carrier for all our manufacturing and distribution centers. These evaluations focus on identifying and mitigating risks related to fire hazards, natural/geographic hazards, operational risks, and security risks.

The insurance provider rates Swagelok's property resilience in the top quartile of their global clients. This means that Swagelok's buildings are highly resistant to common manufacturing and natural risks. In case of a disruption, Swagelok maintains emergency plans at all facilities that are designed to respond to variety of incidents. Swagelok also continues to invest in initiatives and projects to continuously improve building resilience and reduce property risks.

Through our Risk Management program, we have consistently achieved risk elimination and reduction, setting annual targets to move each risk to a low-risk zone. Our efforts focus on addressing risks early in the planning horizon to minimize significant impacts and our Strategic Risk Committee, comprised of functional group directors and managers, plays a

pivotal role in the process. This committee meets quarterly to review enterprise- and functional-level risks, provide strategic direction, and ensure alignment with our operational goals.

CONFIDENTIALITY, PRIVACY, AND CYBERSECURITY

We seek to safeguard the confidentiality, privacy, and cybersecurity of our associates, customers, and partners. Our Code of Conduct emphasizes the importance of protecting sensitive information. As stated above, every year, all associates must review and agree to comply with our code, including its guidelines around confidentiality, privacy, and cybersecurity as well as acknowledge and comply with our Information Security Policy and Privacy and Data Protection Policy on an ad hoc basis.

In support of our privacy commitments, our robust cybersecurity policies include additional layers of protection against data breaches, information sharing, and protecting personal information. All associates are prohibited from sharing any sensitive or confidential information with any external or third-party systems without explicit review and consent. We require associates to prioritize data privacy and secure sensitive information when using any artificial intelligence (AI), including generative AI. We also ensure that all data collected or processed by AI systems internally is handled securely and in accordance with applicable laws and all relevant Swagelok privacy policies and procedures.

Our privacy program is overseen by our data privacy officer (DPO) who works alongside our information technology (IT) and legal teams to ensure robust data protection measures are in place, safeguard sensitive information, and maintain compliance with relevant privacy regulations.

Our privacy policies are comprised of the following key areas:

- **Data Protection Measures:** Our Data Protection Policy helps us maintain the integrity of sensitive information by implementing robust data-protection measures. Associates are required to limit access to personal information to authorized personnel on a need-to-know basis. Our IT security protocols include safeguarding login credentials, prohibiting unauthorized changes to information processing systems, and ensuring that all software and hardware changes are approved by Swagelok IT. We also emphasize the importance of physical security, requiring associates to secure confidential information and devices when not in use.
- **Customer Privacy and Data Handling:** Swagelok is committed to protecting customer privacy and handling data responsibly. We collect, use, and process personal information in a manner consistent with our contractual commitments and applicable laws. Our policies are designed to ensure that customer data is protected from

unauthorized access and is used only for legitimate business purposes. We believe in transparency and are committed to informing customers about how their data is used and protected.

Approach to Cyber Risk Management

Our approach to cyber-related risk assessments and management is critical to protecting our information resources and ensuring the security of our operations. Our comprehensive cybersecurity framework is designed to anticipate, identify, and mitigate potential cyber threats, ensuring resilience and adaptability across our digital landscape.

In the spirit of continuous improvement, we regularly review and update our security measures to adapt to the evolving threat landscape. This includes implementing the latest security technologies and best practices to enhance our defenses against potential cyber-attacks.

- **Advanced Risk Identification and Mitigation:** Our cybersecurity strategy involves advanced risk identification and mitigation techniques to address potential vulnerabilities. We conduct regular risk assessments to evaluate the security posture of our IT infrastructure and identify areas for improvement. This proactive approach allows us to implement necessary security measures and respond swiftly to emerging threats, minimizing potential disruptions to our business operations.
- **Incident Response and Management:** In the event of a cybersecurity incident, Swagelok has

established procedures for prompt response and management. Our incident response team is trained to handle such situations efficiently, ensuring that any breaches are contained and addressed swiftly to minimize impact. Associates are encouraged to report any suspected security issues to the IT or legal departments immediately, enabling us to take timely corrective actions and maintain the trust of our stakeholders.

- **Associate Education and Training:** Our approach includes regular and ad hoc training sessions to ensure all associates are well-versed in best practices for safeguarding information.

SUPPLY CHAIN MANAGEMENT

Our supply chain approach is built on strategic foresight; focusing on anticipation and execution to ensure we meet our customer's needs. We work to understand market dynamics so we can adapt and respond quickly to changes. Swagelok's leadership routinely guides our strategy to maintain alignment with business goals and ensure consistency across the organization.

Our primary manufacturing and distribution channels are located in Northeast Ohio, with additional international distribution centers that serve local territories and global distribution. Along with our strong supplier relationship mechanisms, this strategic placement allows us to leverage both U.S. and international capabilities as well as develop a network of long-term suppliers who adhere to the Swagelok quality system.

We strive to uphold the highest standards of quality and service, ensuring that our supply chain remains robust, transparent, and aligned with our core values.

Supplier Code of Ethics

The Swagelok Supplier Code of Ethics was revised in October 2025 to better align Swagelok and our supply chain with standards issued by the Responsible Business Alliance (RBA) Code of Conduct. These updates also align with Swagelok's values and are in response to strategic Swagelok customer demands. Enhancing alignment with these important industry standards at Swagelok and throughout our supplier base helps ensure a robust and sustainable product supply chain. This updated version adds and expands on several areas, including intellectual property, data privacy, trade compliance, training, product content, environment, human rights, freedom of association, emissions reduction, and more.

Our Supplier Code of Ethics outlines our expectations for all suppliers and addresses critical areas such as labor practices, human rights, integrity, health and safety, and environmental stewardship. We require our suppliers to comply with the principles set forth in our code as well as all applicable laws, rules, and regulations of all countries in which they operate. Direct suppliers must either affirm adherence to Swagelok's Code of Ethics, or demonstrate that their company's code is comparable to Swagelok's.

Central to our operations is a commitment to responsible procurement, which is incorporated into our Supplier Code of Ethics. This commitment sets clear expectations for our suppliers, emphasizing the importance of quality and ethical conduct. We do not tolerate any form of forced or human labor within our supply chain and actively seek to engage with partners who share our commitment to the health, safety, and wellbeing of their employees. We regularly monitor and assess our supply chain practices to ensure compliance with these standards and to foster a safe and equitable working environment for all.

By aligning our procurement practices with these principles, we ensure that we maintain a transparent and accountable supply chain. In doing so, we require suppliers to notify us of any changes in material manufacturing methods or sources that could impact product performance. This includes changes in chemical and mechanical properties, which must be approved by Swagelok to ensure they meet our stringent standards. This rigorous control over production inputs ensures that our products are not only high-quality but also ensures that our products are high-quality, compliant with environmental laws, and produced in an increasingly sustainable manner, reflecting our core values of *Respect for the Individual* and *Continuous Improvement*.

Swagelok exercises due diligence to prevent the use of any “conflict minerals,” such as tantalum (Ta), tungsten (W), tin (Sn), and gold (Au), that may be sourced using forced labor. Swagelok’s Supplier Code of Ethics reflects this commitment by requiring suppliers to certify compliance with responsible sourcing standards, including those addressing conflict minerals, labor and human rights, health and safety, and environmental impact.

Commitment to Quality – Supply Chain Engagement

Alongside our thorough onboarding process to align suppliers with our sustainability objectives, we have established a Supplier Quality System Requirements Policy. Swagelok requires suppliers to meet its documented Supplier Quality System Requirements, which exceeds the expectations of ISO 9001 to meet the demanding applications of our customers.

We require our suppliers to establish and maintain quality systems that ensure products and processes conform to specified requirements. This includes comprehensive documentation, quality planning, and adherence to our Supplier Code of Ethics. We conduct regular evaluations and audits to ensure compliance, and any changes in processes or materials must be approved by us to maintain quality standards. This rigorous evaluation process ensure that our suppliers are compliant and become partners in our sustainability journey.

We also use a detailed scorecard system to monitor supplier performance, focusing on key metrics like quality and delivery. This scorecard is integral to our monitoring processes, which include regular internal audits to verify compliance with our quality standards. These audits are conducted by personnel independent of the activities being audited, ensuring objectivity and thoroughness.

Supplier Risk Management

Swagelok’s approach to supplier risk management is an integral part of our comprehensive risk management framework, ensuring that we maintain high standards of quality and reliability across our supply chain. Our Supplier Risk Management Process is designed to evaluate and mitigate potential risks associated with our suppliers and further support our commitment to operational excellence and customer satisfaction.

• Responsible Supplier Management

The Global Sourcing team has historically managed our supplier base to procure goods from responsible sources and has now memorialized these practices into documented policies. In 2025, we documented our Sustainable Procurement Policy and Conflict Minerals policy, outlining our environmentally and socially responsible approach to selecting suppliers and sourcing goods. The conflict minerals policy specifically requires suppliers

to disclose the source and chain of custody for materials or products containing tin, tungsten, tantalum, and gold (collectively “3TG minerals” or “conflict minerals”) so we can confirm those suppliers do not contribute to conflict, human rights abuse, or environmental harm. We hold our suppliers accountable to sustainable business practices through the execution of these policies.

- **Robust Supplier Assessment Program:** We conduct thorough evaluations of our suppliers, focusing on financial strength, quality, delivery performance, and their business continuity strategies. This ensures that we partner with suppliers who align with our standards and can reliably support our operations.
- **Supply Chain Resilience:** To promote supply chain continuity, we utilize a strategy involving alternate suppliers and back-up plans for key third-party products and services. This approach allows us to manage potential disruptions and maintain a steady supply chain.

Integrating these practices into our supplier risk management approach ensures that we are prepared to address potential challenges and maintain the high levels of service and quality that our customers expect.

Appendix

The Company goals and forward-looking expectations presented in this Report are aspirational and not guarantees or promises that such goals will be met. Forward-looking expectations may be identified by terminology such as “ensure,” “may,” “will,” “should,” “could,” “expects,” “target,” “goal” or the negative of such terms or comparable terminology. These statements reflect management’s current expectations, but involve a number of risks and uncertainties. Scope 1, scope 2, and upstream scope 3 GHG emissions have undergone limited assurance by an independent third party. All other data has not been externally assured. Environmental and emissions data in this report are based on source data where available, and on estimates where source data was not available. The Company undertakes no obligation to update or revise any forward-looking statement in this report.

GRI INDEX

The Global Reporting Initiative (GRI) Standards are a sustainability reporting framework covering disclosures on economic, social, and environmental topics. Disclosures below are from the 2021 GRI Sustainability Reporting Standards.

GRI Disclosure	Disclosure Description	Location or Relevant Information
General Disclosures		
GRI 2-1	Organizational details	See “Company Overview” About Us
GRI 2-2	Entities included in the organization’s sustainability reporting	See “Sustainability Governance”

GRI Disclosure	Disclosure Description	Location or Relevant Information
Supplier Social Assessment		
GRI 414-1	New suppliers that were screened using social criteria	See “Supplier Code of Ethics” Swagelok’s process for engaging new suppliers involves a rigorous risk assessment that includes social criteria to ensure alignment with the company’s sustainability and ethical standards. All potential suppliers must comply with Swagelok’s Supplier Code of Ethics, which mandates efforts to minimize environmental impact. This comprehensive screening process evaluates suppliers on their social practices, including human rights-related issues
GRI 414-2	Negative social impacts in the supply chain and actions taken	See “Stakeholder Engagement” Swagelok assessed impacts on local communities during the DMA conducted in early 2025
Customer Health and Safety		
GRI 416-1	Assessment of the health and safety impacts of product and service categories	See “Product Quality and Safety”
GRI 416-2	Incidents of non-compliance concerning the health and safety impacts of products and services	Swagelok has a robust process to investigate product returns to identify root cause and identify solutions to meet customer needs
Marketing and Labeling		
GRI 417-1	Requirements for product and service information and labeling	See “Product Quality and Safety” See “Product Performance and Sustainability”
GRI 417-2	Incidents of non-compliance concerning product and service information and labeling	0 incidents in the last three years
GRI 417-3	Incidents of non-compliance concerning marketing communications	0 incidents in the last three years

GRI Disclosure	Disclosure Description	Location or Relevant Information
Customer Privacy		
GRI 418-1	Substantiated complaints concerning breaches of customer privacy and losses of customer data	Swagelok has zero complaints in 2025

LRQA Independent Assurance Statement

Relating to Swagelok Company's Greenhouse Gas Inventory for the calendar year 2025.

This Assurance Statement has been prepared for Swagelok Company in accordance with our contract.

Terms of Engagement

LRQA was commissioned by Swagelok Company (Swagelok) to provide independent assurance of its greenhouse gas (GHG) emissions inventory for the calendar year 2025 against the assurance criteria below to a limited level of assurance and materiality of the professional judgement of the verifier using ISO 14064 - Part 3 for greenhouse gas emissions. LRQA's verification procedure is based on current best practice and is in accordance with ISAE 3000 and ISAE 3410.

Our assurance engagement covered Swagelok's operations and activities worldwide and specifically the following requirements:

- Verifying conformance with:
 - Swagelok's reporting methodologies for the selected datasets.
 - World Resources Institute / World Business Council for Sustainable Development Greenhouse Gas Protocol: A corporate accounting and reporting standard, revised edition (otherwise referred to as the WRI/WBCSD GHG Protocol) for the GHG data¹.
- Reviewing whether the Report has taken account of:
 - WRI GHG Protocol Scope 3 Accounting and Reporting Standard
- Evaluating the accuracy and reliability of data and information for only the selected indicators listed below:
 - Direct (Scope 1), Energy Indirect (Scope 2) and Other Indirect (Scope 3) GHG emissions.
 - Scope 3 GHG emissions verified by LRQA only include:
 - Scope 3 Category 1: Purchased Goods & Services
 - Scope 3 Category 2: Capital Goods
 - Scope 3 Category 3: Fuel and Energy Related Activities
 - Scope 3 Category 4: Upstream Transportation & Distribution
 - Scope 3 Category 5: Waste Generated in Operations
 - Scope 3 Category 6: Business Travel
 - Scope 3 Category 7: Employee Commuting

LRQA's responsibility is only to Swagelok. LRQA disclaims any liability or responsibility to others as explained in the end footnote. Swagelok's responsibility is for collecting, aggregating, analyzing, and presenting all the data and information within the Report and for maintaining effective internal controls over the systems from which the Report is derived. Ultimately, the Report has been approved by, and remains the responsibility of Swagelok.

LRQA's Opinion

Based on LRQA's approach nothing has come to our attention that would cause us to believe that Swagelok has not, in all material respects:

- Met the requirements of the criteria listed above; and
- Disclosed accurate and reliable performance data and information as summarized in Table 1 below.

¹ <http://www.ghgprotocol.org/>

The opinion expressed is formed on the basis of a limited level of assurance² and at the materiality of the professional judgement of the verifier.

Table 1. Summary of Swagelok's GHG Emissions Data for the Calendar Year 2025:

Scope of GHG emissions	Category	Metric Tons CO ₂ e
Scope 1	Direct	12,444
Scope 2	Location-based ¹	55,369
	Market-based ¹	49,812
Scope 3	Category 1: Purchased Goods and Services	143,102
	Category 2: Capital Goods	18,138
	Category 3: Fuel and Energy Related Activities	10,195
	Category 4: Upstream Transportation and Distribution	10,018
	Category 5: Waste Generated in Operations	2,056
	Category 6: Business Travel	4,335
	Category 7: Employee Commuting	10,494
Note 1: Scope 2, Location-based and Scope 2, Market-based are defined in the WRI/WBCSD GHG Protocol Scope 2 Guidance, 2015		

LRQA's Approach

LRQA's assurance engagements are carried out in accordance with our verification procedure. The following tasks were undertaken as part of the evidence gathering process for this assurance engagement:

- interviewing relevant employees of the organization responsible for managing GHG emissions data and records;
- assessing Swagelok's data management systems to confirm they are designed to prevent significant errors, omissions or mis-statements in the Report by evaluating the effectiveness of data handling procedures, instructions and systems, including those for internal quality control;
- verifying historical GHG emissions data and records at an aggregated level for the calendar year 2025;
- conducting a pre-verification of the data ahead of the main verification, focused on the base year data; and
- confirming that the base year recalculation policy requirements had been met, and that a recalculation is not required.

LRQA's Standards, Competence and Independence

LRQA implements and maintains a comprehensive management system that meets accreditation requirements for ISO 14065 *Greenhouse gases – Requirements for greenhouse gas validation and verification bodies for use in accreditation or other forms of recognition* and ISO/IEC 17021 *Conformity assessment – Requirements for bodies providing audit and certification of management systems* that are at least as demanding as the requirements of the International Standard on Quality Control 1 and comply with the *Code of Ethics for Professional Accountants* issued by the International Ethics Standards Board for Accountants.

² The extent of evidence-gathering for a limited assurance engagement is less than for a reasonable assurance engagement. Limited assurance engagements focus on aggregated data rather than physically checking source data at sites. Consequently, the level of assurance obtained in a limited assurance engagement is lower than the assurance that would have been obtained had a reasonable assurance engagement been performed.

LRQA ensures the selection of appropriately qualified individuals based on their qualifications, training and experience. The outcome of all verification and certification assessments is then internally reviewed by senior management to ensure that the approach applied is rigorous and transparent.

Signed

Dated: 28th May 2026

Alexander Peirce
LRQA Lead Verifier
