

Energy Emissions Surveys

Get a Free Hour of Connections Leak-Checked On Us

The performance of any system carrying a gaseous or liquid medium is often difficult to guarantee. Energy Emission Surveys have been used as a means to point out the presence of leakage in gas systems.

Not only are these leaks insidious in nature (24 hours a day, every day of the year), but substantially add to operating costs, promote fugitive emissions and adversely affect the environment. We are prepared to offer you the manpower and resources to help you investigate the leakage in your system and add money to your bottom line by reducing inefficiencies due to leaks.

Swagelok Experience

Swagelok has conducted over 350,000 emissions surveys around the world in our customers' facilities, those using both Swagelok and other manufacturer's fittings. So if you suspect there may be an issue and don't know where to start, our trained associate can provide an on-site energy survey to test the assemblies and connections you have in place.

Survey Process:

Because of concern for safety and performance, we review the program with your maintenance, instrumentation or supervisory personnel and conduct a leak survey using SNOOP® liquid leak detector.

Conditions Attached to the Leak Survey:

- Your representative should accompany our associate during survey to witness leaks if any. Results must be initialed by your representative.
- You can select an area of plant where gas (not liquid) lines have positive pressure service.
- All fittings in the given area, regardless of brand, plus instrumentation valve tube ends will be tested.
- Up to one hour's worth of connections checked, free of charge.

Results and Actions:

Upon completion of the survey, you will receive a detailed report including all information on connections tested and any issues identified and all leaks will be tagged for repair.

The Benefits Include:

- Reduces emissions and energy lost in your facility.
- Decreases maintenance time and leak repairs.
- Reduces rework.
- Saves money on labor costs.
- Up to one hour of fitting connections leak checked free of charge.
