

Systemized Optimization

Part 3

Swagelok Application Solutions are your first choice for unparalleled safety, efficiency, and performance, no matter your industry or fluid-system challenge.

MECHANICAL SEAL SUPPORT SYSTEMS

Seal Plan Kits

- Bent tubing is used versus leak-prone threaded connections
- Can be designed to your specific site requirements
- Ensure installation of high-point vents and low-point drains
- Complete component packages available for **API Plans 11, 12, 13, 14, 21, 22, 23, 31, and 41**...and for **Atmospheric Side Plans 51, 62, 65A, and 65B**
- **API 682** standard design

Seal Plan Assemblies

- Panels, Seal Pots, or Skids
- Numerous configurations available to meet your specific site/application requirements
- Can be ordered separately or with an associated Field Installation Kit
- Available for **Side Plan 32**...and for **Between Seal Plans 52, 53A, 53B, 53C, 54, 55, 72, 74, 75, 76, and 72/76**
- **API 682** standard design

- Expertly designed and built **LOCALLY** by Swagelok-certified technicians
- Will drastically reduce your rotating equipment's vibration and leakage potential
- Virtually eliminate harmful emissions
- No pipe threads or unnecessary connections
- Easy to install and maintain
- Easily configurable; ultra safe
- Avoid unscheduled and excessively costly pump shutdowns, no matter what your application challenge
- Fully covered by the renowned Swagelok Limited Lifetime Warranty

REPLACE

traditional threaded and/or welded pipe connections with bent tubing
