

Swagelok
is *Synonymous with*
Sustainability

In the past, we have often conveyed how **Swagelok Componentry**, the world's leading leak-tight, premium-quality, ultra-reliable Tube Fittings, Valves, Gauges, Hose, Tubing, and Assemblies, **are made with a user's ultimate safety first in mind.**

But, Swagelok Company – *in all we do to provide you the products and services to enable you to significantly enhance productivity and profitability* – is also passionately dedicated to protecting the environment as we determinedly strive to reduce our carbon footprint.

WE ARE FULLY COMMITTED TO:

- Reducing Scope 1 Greenhouse Gas Emissions (originating from our on-site fuel combustion for heating/manufacturing operations) by 42% by 2030
- Reducing Scope 2 GHG Emissions (associated with the electricity we purchase to power our processes) by the same percentage and by the same year
- Responsible handling, storage, and disposal of chemicals at all our manufacturing sites

ENVIRONMENTAL STEWARDSHIP

Respect for the communities in which we live and work is paramount to our activities. We pledge to:

- Adhere to all applicable compliance obligations required by local laws/agencies
- Establish objectives to enable us to continually improve our environmental performance
- Incorporate environmental responsibility into our overall business fabric and initiatives
- Maintain our **ISO 14001 Environmental Management System** to guide our efficient use of resources and waste reduction efforts – while simultaneously fostering a culture of environmental responsibility among our associates at all levels

CLIMATE CHANGE

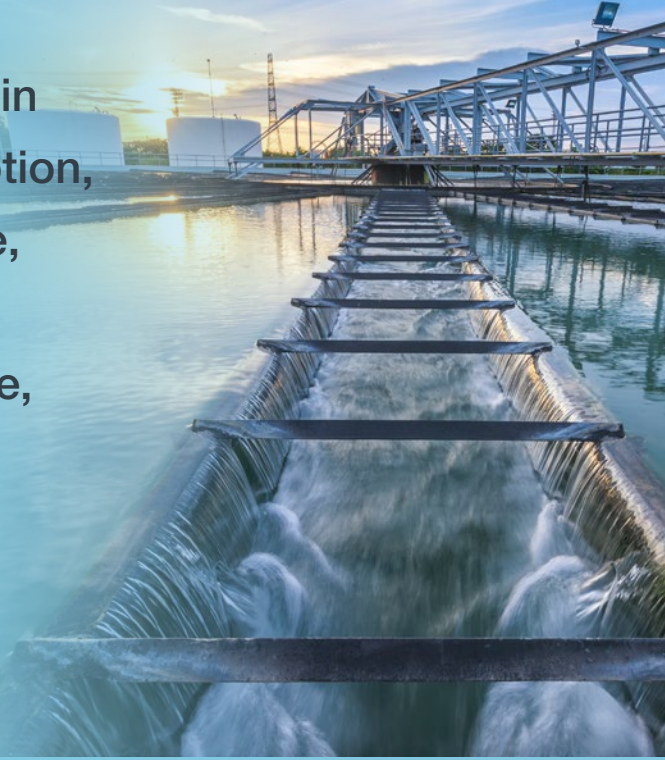

We realize that our customers in energy-intensive industries are constantly challenged to balance their operational demands with environmental considerations. That's why:

You can always rely on our products for far fewer leaks, drastically lowered harmful emissions, and greatly improved process efficiencies

In addition, we now have a dedicated Manager of Global Sustainability who, along with a core team and executive steering committee, leads all such environmental outcomes, including program management, reporting, and organizational alignment and engagement!

Lastly, we have stringent Water Use and Wastewater/Waste Management policies in place to help us minimize water consumption, treat on-site wastewater before discharge, and effectively and systematically control waste collection, characterization, storage, transportation, processing, treatment, recovery, and disposal. Whether reusing scrap metal or oil, we are 100% set on reducing waste generation at the source.

Bottom Line: We understand and can help improve your day-to-day efforts to drive your productivity and efficiency...all while keeping our world safe and clean. For complete details, visit:
